

How to run the project?

Step 1: create a MongoDB account.

Step 2: Create a project with the name "e-commerce" and the create a database.

Step 3: now click on "connect" and click on "compass". Now copy the link and go to e-commerce-backend.

Step 4: open index.js file and paste the copied link in mongoose.connect code line at where it is indicated.

Step 5: add your password that you set up while you were creating the database, instead of the text that says .

Step 6: now open an integrated terminal inside backend and type npm install to install all dependencies.

Step 7: now type node .\index.js and run it, this should give a message saying "Server running on port 4000".

Step 8: now go to e-commerce-frontend and download all dependencies by running npm install and then run npm start which should start the frontend server.

Step 9: if you want to add products to the e-commerce website, go to e-commerce-admin and follow the same steps as step 8, to launch the admin panel server as well.

Now, you should be able to successfully run the entire application.
